

Electron Event Selection in Doubly Charged Higgs Simulations

Reese Sanders
KSU REU 2023

Standard Model of Elementary Particles

Type II Seesaw Model

[1] Stefan Antusch, et al., [arXiv:1811.03476 \[hep-ph\]](https://arxiv.org/abs/1811.03476) (2018), “Low scale type II seesaw: Present constraints and prospects for displaced vertex searches.”

Modes of Decay

$$H^{\pm\pm} \rightarrow \ell^{\pm}\ell^{\pm}$$

[2] The CMS Collaboration, **CMS Physics Analysis Summary.**, “A search for doubly-charged Higgs boson production in three and four lepton final states at $\sqrt{s} = 13$ TeV”

The Process

- Choose Leptons
 - Focus on electrons —4e events in particular
- Examine Triggers
- Examine Cuts
 - On Signal and Background

The Triggers

The Cuts — Signal

- 5 Levels of Cut:
 - Veto
 - Loose
 - Medium
 - HEEP
 - Tight
- What do these look like?
 - What passes for reconstruction?

Number of Tight Cut Electrons Over 4e (gen level) Events

Number of Medium Cut Electrons Over 4e Events

Number of Loose Cut Electrons Over 4e Events

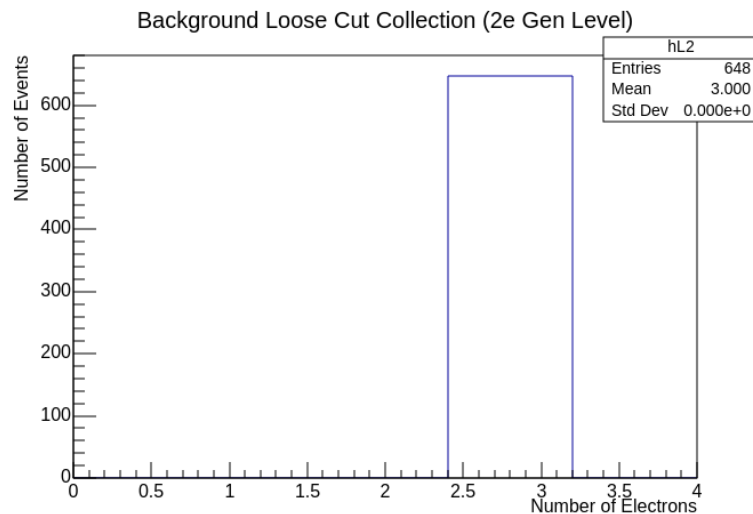

Number of Veto Cut Electrons Over 4e Events

The Cuts —Background

- Many backgrounds to analyze
 - Focus on one
- False electron sources
 - Zboson
 - Bottom quark
- How many events pass 3+ loose electrons?

Quantifying Signal and Background

- Background Contribution =
 - $\text{Luminosity} \times \text{CS} \times \text{BR} \times (3e \text{ Acceptance}) \approx 5409 \text{ events}$
- Signal Contribution 3e =
 - $\text{Luminosity} \times \text{CS} \times (\text{BR})^2 \times (3e \text{ Acceptance}) \approx 1.6313 \text{ events}$
- Signal Contribution 4e =
 - $\text{Luminosity} \times \text{CS} \times (\text{BR})^2 \times (4e \text{ Acceptance}) \approx 2.7062 \text{ events}$

- $\text{Acceptance} = N_{\text{passing}} / N_{\text{total}}$

Loose Electron Momenta

Conclusions & Future Work

- Where do we cut our data?
 - $p_T > 200$ GeV
- Set Expectations for future data
 - Only 1 to 3 H^{\pm} related electron events
 - Significantly More Background events

- Analyze the other backgrounds
 - ZZ, WW, etc.
- Analyze taus similarly
- Analyze selected events
